

Temporary Dental Services

PROPERTY PROTECTION YOU NEED

In response to recent catastrophic events across the country, the PPP and RMC Group teamed up to create the Temporary Dental Services Program. What has developed from this partnership is a turn-key solution that meets the specific needs of the dentist and gets them back in operation in a rapid fashion. This program is unique to the PPP, no other competitor offers such a valuable service.

“ The PPP dental recovery program is unique to the competition in many ways. ”

- Dr. Barry Saltz, D.D.S, P.A.

Key Services Provided after Catastrophic Loss:

Initial damage assessment and inspection.

Temporary facility location identified. Assist in lease negotiation, if needed.

Buildout of temporary facility space.

Temporary dental equipment provided during the period of restoration.

Removal of temporary dental equipment once permanent is installed.

Value Added Services Provided:

On average, RMC has been able to restore the dental office in a temporary location within 40 days of the catastrophic event.

Dentists that have participated in the program have retained 90% of their patients.

The two primary objectives of the PPP dental recovery program are to retain the dentist's patients and minimize the loss of business income and extra expense exposure. We assist the insured by quickly locating a building as a temporary facility and securing a lease agreement. The program sets a time-frame of approximately 30 days to outfit the facility with any building modifications and installation of temporary equipment to resume full day-to-day operations. Certain property losses (e.g., fire, smoke, water, etc.) may not require the relocation program if repairs can be completed in an expedited fashion.
